CONTRIBUTIONS TO HERPETOLOGY—Book-length monographs, comprising taxonomic revisions, results of symposia, and other major works

Recent Contributions:

The Lives of Captive Reptiles by Hans-Günter Petzold. 2008. A synthesis of information on captive and wild reptiles (and selected amphibians) covering their physiology, behavior, and reproductive biology. Of value to academics, zoo personnel, veterinarians, terrarists, and conservationists interested in the maintenance, reproduction, and observation of reptiles in captivity. 308 pages, 63 photographs (57 in color), index. Hardbound \$55.00

Contributions to the History of Herpetology, volume 2 by Kraig Adler, John S. Applegarth, and Ronald Altig. 2007. Biographies of 285 leading herpetologists (with portraits and signatures), index to 3604 authors in taxonomic herpetology, and academic lineages of 3810 herpetologists. Worldwide coverage. 396 pages, 269 portraits, color frontispiece. Clothbound \$65.00

HERPETOLOGICAL CIRCULARS—Miscellaneous publications of general interest to the herpetological community.

Recent Circulars:

Scientific and Standard English Names of Amphibians and reptiles of North America North of Mexico, sixth edition, by the Committee on Standard English and Scientific Names (Brian I. Crother, Chair). 2008. 84 pages. \$12.00

A Review of Marking and Individual Recognition Techniques for Amphibians and Reptiles, by John W. Ferner. 2007. 72 pages. \$11.00

Chameleons: Johann von Fischer and other Perspectives, by James B. Murphy. 2005. 123 pages, many color plates. \$13.00

FACSIMILE REPRINTS IN HERPETOLOGY—Exact reprints of classic and important books and papers. Most titles have extensive new introductions by leading authorities.

Recent Facsimile Reprints:

Peracca, M.G. 1882–1917. *The Life and Herpetological Contributions of Mario Giacinto Peracca (1861–1923)*. A collection of 64 herpetological titles, with descriptions of 22 new species of amphibians and 52 of reptiles. Introduction, annotated bibliography, and synopsis of taxa by Franco Andreone and Elena Gavetti. 550 pages. Clothbound \$55.00

Bourret, R. 1941. *Les Tortues de l'Indochine*. The definitive review of the turtles and tortoises of Indochina, covering an area from Northeast India and the Malay Peninsula to Vietnam. Introduction by Indraneil Das. 264 pages, 15 plates (6 in color). Clothbound \$65.00

HERPETOLOGICAL CONSERVATION—A series of book-length monographs, including symposia, devoted to all aspects of the conservation of amphibians and reptiles.

Recent titles in Conservation:

Ecology, Conservation, and Status of Reptiles in Canada, by C.N.L. Seburn and C.A. Bishop (eds.). 2007. Chapters by 42 authors dealing with ecology and conservation. Appendices on the conservation strategy and the current status of reptiles in Canada. 256 pages, numerous photographs, figures, and tables; index. Clothbound \$40.00

Urban Herpetology, by J.C. Mitchell and R.E. Jung Brown (eds.). 2008. 42 chapters and 12 case studies covering numerous aspects of amphibians and reptiles in urban environments. Worldwide in scope. Clothbound, price to be determined.

Society for the Study of Amphibians and Reptiles

An Invitation to Membership

THE SOCIETY FOR THE STUDY OF AMPHIBIANS AND REPTILES—an association of biologists from about 60 countries—invites you to enroll as a member. By joining, you will participate in the expansion of an already extensive program of publications and activities for herpetologists.

SSAR, the largest international herpetological society, is a not-for-profit organization established to advance research, conservation, and education concerning amphibians and reptiles. Founded in 1958, SSAR is widely recognized today as having the most diverse society-sponsored program of services and publications for herpetologists. Membership is open to anyone with an interest in herpetology.

JOURNAL OF HERPETOLOGY is the Society's official scientific journal and covers all aspects of the biology of amphibians and reptiles. Issues are published quarterly (volumes total 800 pages; format 7 × 10 inches [18 × 26 cm]) and are extensively illustrated. This journal is included in membership.

Sample titles from a recent issue:

- Estimation of hybridization and introgression frequency in toads (genus: *Bufo*) using DNA sequence variation at mitochondrial and nuclear loci
- Nesting behavior and the use of termitaria by the Andros Iguana (*Cyclura cyclura cyclura*)
- Evaluation of a long-term amphibian monitoring protocol in Central America
- Effects of reproductive burden on endurance performance in Side-Blotched Lizards (*Uta stansburiana*)
- Geographic variation in cranial shape in the Pumpkin Toadlet (*Brachycephalus ephippium*): A geographic analysis
- Sex-related differences in hematological stress indices of breeding paedomorphic Mole Salamanders

HERPETOLOGICAL REVIEW began as the Society's official newsletter, but has grown into an important journal with articles and papers on techniques, natural history notes, and geographic distribution records. Regular columns cover SSAR business, meetings, obituaries, newsnotes, current research, and zoo view. Issues are published quarterly (volumes total 500 pages; format 8.5 × 11 inches [21.5 × 28 cm]) and are extensively illustrated. This journal is included in membership.

Sample titles from a recent issue:

- Eastern Kingsnake (*Lampropeltis g. getula*) population decline in northern Florida and southern Georgia
- Additions to the herpetofauna of Endau-Rompin, Johor, West Malaysia
- A protocol for clearing and double staining squamate specimens
- Laboratory protocols for husbandry and embryo collection of *Anolis* lizards
- Amphibian chytrid fungus infections in *Hyperolius* (Anura: Hyperoliidae) from the eastern Democratic Republic of Congo

CATALOGUE OF AMERICAN AMPHIBIANS AND REPTILES (CAAR) represents one of the most important long-term cooperative activities undertaken by the American herpetological community. Issued as loose-leaf accounts of taxa (1 to 17 letter-sized pages in length), each account authored by a leading herpetologist, serves as a complete and current summary of the knowledge of each taxon. The CAAR is not restricted to those taxa occurring within the United States, but covers the entire Western Hemisphere (North, Central, and South America as well as the Caribbean). The *Catalogue of American Amphibians and Reptiles* sets the standard for archival taxonomic publications and has been emulated by biological societies worldwide.

Society for the Study of Amphibians and Reptiles
2009 Membership Offer:
Join and receive books worth equal to, or greater than the cost of membership — Free!
Low Membership Rates
starting at \$60 (\$35 for students)
Subscriptions starting at \$20
